CHART

(thousands of dollars)

GA2950003

Co., Balto., MD. Printed in U.S.A.

HOW TO READ THIS CHART

All cities are grouped alphabetically by region. Each region follows one another in a specific sequence both horizontally and vertically and is identified on the chart. It is important to note that the payoff between two cities is the same no matter which is the destination city or the start city. For example, the payoff from New York to Reno is the same as the payoff from Reno to New York.

PROCEDURE

1. The chart must be read the same way at all times. That is, one city must be located along the column and one city must be located down the row. This is because only one payoff between two cities is listed even though the trip can be made from two directions.
2. Always locate the city closest to the Northeast region along the column and the other city in its proper row.

For example, a player has just finished a trip from Seattle to Kansas City. Kansas City is in the Plains and Seattle is in the Northwest. Plains is closer to the Northeast than the Northwest; so, Kansas City is located alphabetically among the nine cities in the Plains column. Seattle is located in the Northwest row in the same way. The payoff is located by cross-indexing the row and the column.
